SHIPPING BOXES

Artwork specifications

1 Choose the exact box template

Match the width, depth and height to the ordered box. These templates are for 3 mm B-flute board. Do not substitute another size or rescale a dieline. If your size has no download, obtain its confirmed template before preparing artwork.

2 Preserve the dieline and guide layers

Keep the original document size and locked layers unchanged. Add artwork on Your Design or a separate new layer. Follow the marked bleed, safe-artwork, fold and glue areas. Bleed must follow the template rather than a generic margin.

3 Colour and image resolution

Prepare artwork in CMYK. Bitmap images must be at least 130 dpi at the final printed size. If a Pantone reference is required, use its PANTONE+ Solid Coated library swatch.

4 Type and placed artwork

Convert every font to outlines (paths or curves). Embed all linked images and other placed elements so the PDF contains everything needed to print.

5 Export the production file

Supply a PDF at 100% scale, without crop, trim or registration marks. Check the final dimensions before uploading.

6 Send your artwork

Upload files up to 50 MB each in your Platinum Signs cart, or supply them later with your order reference. For larger files, send a Google Drive or WeTransfer link to info@platinumsigns.com.au. We provide a proof before production.
